- This composite represents investment performance for portfolios with an Equity Income investment objective for which Argent has sole investment discretion. Portfolios typically include the following as a percentage of total portfolio value: equity holdings (excluding mutual funds) greater than 80%; cash less than 10%; and fixed income, mutual funds and preferred investments less than 20%. This composite inception date is January 2005 and was created in September 2011. A list of composite descriptions and broad distribution pooled funds are available upon request. The name was changed from Argent Large Cap Equity Income Composite to Argent Large Cap Dividend Select Composite in September 2012.
- The benchmark is the Russell 1000 Value Index which measures the performance of the large-cap value segment of the U.S. equity universe. It includes those Russell 1000 companies with lower price-to-book ratios and lower expected growth values. Performance results prior to December 31, 2012 were measured against the S&P 500 Index. Effective September 30, 2018 we will no longer present the S&P 500 Index. - Valuations are computed and performance reported in U.S. currency. Performance results are total return, (i.e. include the reinvestment of all income). Policies for valuing investments, calculating performance, and preparing GIPS Reports are available upon request. Past performance is no guarantee of future results.
- Gross-of-fee returns are presented before management and certain custodial fees, but after all trading expenses except where commissions have been waived. Net-of-fees performance is calculated by reducing gross performance by actual management fees incurred. During 2019 & 2020, the composite included portfolios where commissions were waived representing approx. 20% of composite assets.
- Standard annual advisory fees are calculated as a percentage of assets under management according to the following schedule; 1% on the first \$1M, .80% on the next \$2M, .65% on the balance thereafter, although fees may be negotiated or waived in certain circumstances. Non-fee paying accounts represent less than 1% of the composite assets during the periods of 2012 - 2020.
- Internal dispersion is calculated using the asset-weighted standard deviation of all portfolios that were included in the composite for an entire year, net of fees. The three-year annualized standard deviation measures the variability of the composite and the benchmark returns over the preceding 36-month period. The external deviation is based on the 36 month gross-of-fees returns of the composite and the benchmark.
